## PHP Challenge

Given an array of integers, create a function to find the continuous subsequence with the maximum sum and return this as an array.

Example:

Given the array [ 1 , -5 , 2 , -1, 2 , -1 ], your script should return [ 2 , -1 , 2 ]

Your code should be clearly laid out and well commented.

If you wish, you can include a discussion of the problem at the top of your php file.

Good Luck!
